Re: Specification of NR (Purity)

Dear Patrick/Rebecca,

We are requesting AMPAC to lower the specification for the purity of NR from $\geq 95\%$ to $\geq 85\%$. We are confident that given the consistent delivery of NR at $\geq 95\%$ purity, that the team will continually deliver on this high purity NR. However, we also want to give ourselves the flexibility to use other lots of NR that may have a lower purity profile, while the pre-established levels of residual solvents continue to be met. We have worked with our contract manufacturers to ensure that our label claim of 125mg/capsule of NR is met for all Basis lots manufactured with the new purity spec. They will adjust each batch accordingly in order to meet label claim. Please proceed with this change effective immediately.

Regards,
